## Technical Data Sheet

### ADIGREASE GDW

#### **Description**

Adigrease GDW is a selected blend of wax and moellon developed as a complete hot-stuffing material.

#### **Typical Analysis**

Charge	N/A
Moisture	1% Max.
pH	N/A

#### **Application**

Adigrease GDW may be applied in normal hot-stuffing procedures, and may also be blended with other components like wool grease and oils to give a wide variety of feel to leathers. Normally the product is melted, blended with other greases, then pumped into a preheated hot-stuffing mill.

When it is used as a topping oil, it should be melted and added to the cationic oil – such as Adioil CDS as required. A typical wet-stuffed procedure would require 2-3 % Adigrease GDW, and would be carried by between 8-12% of Adioil CDS or Adioil ASG.

#### **Directions for Dissolving**

Adigrease GDW must be melted before adding to Adioil CDS or Adioil ASG. After mixing the combined product can be diluted with water and added at temperatures of at least 60°C.
