## Technical Data Sheet

### Adioil BSF

Adioil BSF is an electrolyte resistant bisulfate fish oil.

#### **Description**

Adioil BSF is a highly bisulfate fish oil which has been fully deodorized so virtually no odor is carried over to the finished leather.

This oil gives excellent softening properties, and because of its high resistance to electrolytes it may be used under a very wide range of conditions. It has a golden brown color and is an oil of medium viscosity. It will carry large amounts of raw oils to enhance a rich surface feel.

#### **Typical Analysis**

Charge	Anionic
Moisture Content	16% +/- 1%
pH	6.0 - 7.0

#### **Application**

Adioil BSF produces leather of excellent softness and gives improved tear strength in the leather fibers. It may be used on both grain and split garment leathers, upholstery, footwear, and gloving leathers. It may be also used with other fatliquors on sheepskin leathers.

Normally between 5-12% is used depending on the application.

#### **Directions for Dissolving**

Adioil BSF may be readily dissolved in both hot and cold water, but if raw oils are to be utilized they should be mixed with the Adioil BSF before the addition of water.
