## Technical Data Sheet

### Aditan A

#### Description

Aditan A is an anionic resin retanning agent based on an acrylic copolymer. It has been developed to give a very good filling effect while maintaining tightness and a good grain appearance.

#### Typical Analysis

Appearance Straw colored Liquid  
% Solids 27-29.  
pH 10% soln 6.0-8.0

#### Applications

Aditan A is suitable for filling and tightening all types of leather of chrome and semi-chrome leathers. It is especially useful for tightening loose belly and flank areas and produces a mellow round handle. It is a very versatile product and is stable in working floats down to pH 3.5.

Aditan A has very good fastness to heat and light and, importantly does not adversely affect hydrophobic properties so can be used in retanning systems for highly waterproof leathers.

It is normally used in combination with other polymeric, synthetic and/or vegetable tanning agents at a level of 3-4% based on shaved weight. It is normally diluted with water of 120 F (50 C) at a ratio of 1:4.

#### Package / Shelf Life

Aditan A is available in all pack sizes through to totes and tanker sizes. It is not sensitive to frost and has a shelf life at room temperatures of at least 1 year.
