

Technical Data Sheet

Aditan TS

Description

Aditan TS is an auxiliary used to improve the tear strength and softness of a wide variety of leathers. It is composed of fatty alcohol sulfate derivatives.

Typical Analysis

Appearance Beige paste
Ionic nature Anionic
pH 10% solution Approx 6-8

Properties

Aditan TS is resistant to electrolytes, and has moderate resistance to strong acids in normal works processes. Its use gives a considerable improvement to the tear strength of most hides and skins, along with a softening effect.

Application

Aditan TS is normally added at a level of 1.5-3.0% during neutralizing, and at a similar level 10-15 minutes before the fatliquors are added during the fatliquoring process. Normally 2-3 parts of water are mixed into 1 part of Aditan TS before diluting as required.
